

NCR SelfServ™ Checkout

Looking to improve your operational efficiencies while building brand loyalty?

YES

NCR SelfServ Checkout is a flexible, efficient way to improve operations and enhance the shopping experience

NCR SelfServ Checkout allows customers to scan, bag and pay for items on their own, while an associate monitors from a station nearby to help ensure a positive experience. The new generation solution features a refined, stylized design with store and lane reconfiguration capability.

- **Improve the shopping experience**

NCR SelfServ Checkout speeds up the checkout process by making more checkouts available more of the time. Shorter lines, greater privacy, greater control and more choice make consumers happier and more loyal to your brand.

- **Maximize your resources**

NCR SelfServ Checkout allows you to better meet customers' needs throughout the store by redeploying labor to other areas. Associates are freed up to answer in-aisle questions, maintain inventory and assist customers.

- **Customize for your retail format**

The design of NCR SelfServ Checkout protects your investment, supporting easy, in-lane upgrades for unloading, bagging and color options. You can also request color customization to match your store, for a consistent look and feel that extends your brand.

- **Seamlessly integrate with your existing systems**

The NCR SelfServ Checkout open architecture seamlessly and easily integrates with existing POS applications and peripherals using a customized Transaction Broker software layer to create a "virtual cashier" for each self-checkout lane.

- **Ensure accuracy and protect against shrink**

A number of psychological and physical theft deterrents are included in the NCR SelfServ Checkout, including an integrated security scale, a sophisticated self-learning and adjusting weight database, intervention lights and sounds, and attendant-monitoring tools.
